LANGUAGES

Arabic — Native
English — B2 (Professional)

TECHNICAL SKILLS

AI & Machine Learning: LLMs, Generative AI, Agentic AI, RAG, Graph RAG, NLP, TensorFlow, Multimodal AI, Multi-Agent Systems.

Agentic AI & Automation: Autonomous Agents, Multi-Agent Orchestration, Agent Memory & Tooling, LangChain, LangGraph, Semantic Search, n8n.

Full-Stack: Python, Java, Spring Boot, Microservices, REST APIs, React, JavaScript, Next.js.

Databases: Oracle, PostgreSQL, MySQL, Supabase.

DevOps & Cloud: Docker, CI/CD, Linux, Shell Scripting, Google Cloud.

CERTIFICATIONS

- OCI 2025 — Data Science Professional (Oracle)
- OCI 2025 — Generative AI Professional (Oracle)
- Multi-Agent Systems (Coursera)
- Retrieval-Augmented Generation — RAG (Coursera)
- Generative AI & LLMs (Coursera)
- Spring Boot · React · Microservices · Docker (Udemy)
- Full-Stack Development Program

PROFILE

AI Software Engineer specializing in agentic AI, generative AI, and full-stack development. Builds and ships production AI systems end to end — autonomous agents, generative-AI applications, and the full-stack platforms behind them — and currently leads the AI engineering and design of an enterprise AI assistant in production, from architecture through deployment.

EXPERIENCE

- Software Engineer — AI Lead** Jan 2025 – Present
Bayanat — Amman, Jordan
- Lead AI engineer and designer of Bayanat's flagship agentic-AI assistant — own the multi-agent architecture, RAG and Graph RAG pipelines, and end-to-end delivery from design through production.
 - Design and orchestrate autonomous agents (planning, reasoning, tool use, and memory) that let users query large enterprise knowledge bases in natural language.
 - Own deployment and operations — Dockerized microservices with Spring Boot and Oracle/PostgreSQL — and am accountable for the system's reliability in production.
 - Gained hands-on experience in full-stack development using Java, Spring Boot, React, SQL/PLSQL, and relational databases including Oracle, MySQL, and PostgreSQL.

- Trainee Software Engineer** Jun 2023 – Jul 2023
Star Ways
- Hands-on training in client requirements analysis and proposal workflows, with exposure to an internal automation system and how business needs translate into technical solutions.

KEY PROJECTS

- Bayanat AI Assistant** — Enterprise agentic-AI assistant over internal knowledge bases — multi-agent retrieval, reasoning, and tool use via LangChain/LangGraph on a RAG & Graph RAG pipeline; React UI, Spring Boot/Oracle/PostgreSQL backend, Docker microservices.
- Resolution Evolution** — AI image super-resolution tool built with Python and TensorFlow — deep-learning model training, evaluation pipelines, and quality benchmarking.
- Agentic AI Automation System** — Multi-agent platform where autonomous agents plan and execute multi-step tasks via tool calling, shared memory, and orchestration to automate complex business processes end to end.
- Knowledge Graph RAG Engine** — Retrieval system combining a knowledge graph with vector search to answer multi-hop questions over structured and unstructured data, returning grounded, source-cited responses.

Also built: Multimodal Document Intelligence Platform, LogoAnimate Pro (AI logo animation), n8n workflow automation, YouTube Downloader, and a Python web scraper.

EDUCATION

- BSc, Artificial Intelligence & Computer Science** Graduated Jul 2024
Tafila Technical University — Tafila, Jordan
- GPA 3.12 (Very Good).** Focus on AI, full-stack systems, and source-code security research.
